

MRI-scan

Clinical trial of a new contrast agent that is being developed for use with MRI-scans

Compensation

€ 5.223 + € 0,21 per km travel allowance

- If you go home early as a reserve participant, you will also receive compensation
- You will receive an interim payment for this research

Target audience

- Male or female
- Healthy
- 18 to 60 years
- Between 40 and 120 kg
- BMI between 18.1 and 31.9 kg/m²
- 0 to 5 cigarettes per day

Medication administration

- 1 time a tablet, and
- 3 times an intravenous injection (into a vein)

Time investment

- Medical screening (2 times)
- Stay: 1 time 14 days
- Follow-up visit (1 time)

Particularities

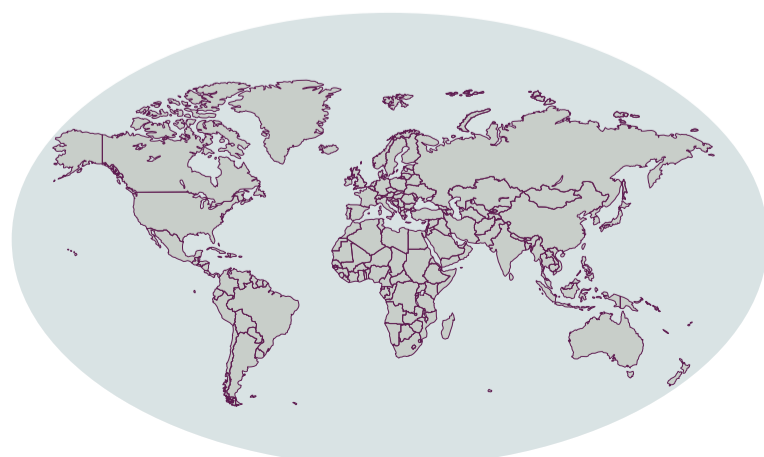

- You will be given an IV needle to draw blood
- During the second medical screening and during the follow-up, an MRI scan of the brain is made. Depending on the results, another follow-up may follow.
- During this research, a fluid that is used to make medical images, such as an MRI scan, is tested.
